2.a. Definition and concepts

Household income growth rate is the annual growth rate of real household income per capita.

2.c. Classifications

Not applicable

3.a. Data sources

Survey of Vietnamese people's living standards.

3.d. Data release calendar

2 years.

3.e. Data providers

General Statistics Office

3.f. Data compilers

General Statistics Office

4.a. Rationale

The indicator helps to reflect the fairness in the development of common prosperity of a country, helps to consider and propose welfare policies for the disadvantaged group (poor group) in society.

5. Data availability and disaggregation

Data is available every 2 years from 2010-2018 disaggregated by urban/rural area.

Data on the spending growth rate of the poorest 40% of the population has not been released compared to the national average.

(Published source: 2020 national report on 5-year progress towards implementation of sustainable development goals)

6. Comparability/deviation from international standards

This indicator corresponds to the global SDG target 10.1.1: Growth rates of household expenditures or income per capita among the bottom 40 per cent of the population and the total population

The indicator name of Vietnam is not exactly the same as the name of the global indicator, but the Vietnamese indicator covers more broadly than the global indicator. In which, there is a regulation to classify the poorest 40% of the population, so it is possible to calculate the ratio between the growth rate of the poorest 40% of the population compared with the growth rate of the whole country. guaranteed international comparison.
