4.a. Rationale

- Evaluate the effectiveness of HIV/AIDS intervention programs and projects, especially in the management and care of AIDS patients.
- As a basis for propaganda to mobilize the community to participate in HIV/AIDS prevention
- Assessment of the danger level of HIV/AIDS.

4.b. Comment and limitations

Indicator 3.2.1. The number of new HIV infections detected annually per thousand people without HIV is a new indicator specified in Vietnam in the Statistical Indicators for Sustainable Development of Vietnam (calculated per 100,000 uninfected people).).

Meanwhile, Vietnam's National Statistical Indicators System has a target code of 1607. Number of currently detected HIV infections per one hundred thousand population (calculated per 100,000 population).

Data on the number of people living with HIV/AIDS in Vietnam (with breakdown by number of new findings) are published annually in the Statistical Yearbook of the General Statistics Office by region and province/city directly under the Central Government.

4.c. Method of computation

Method of computation

Công thức tính:

$$\frac{\text{Số ca nhiễm HIV mới được phát hiện hàng năm trên một nghìn người không bị nhiễm HIV}}{\text{Tổng số người mới được phát hiện nhiễm HIV trong năm xác định}} = \frac{\text{Tổng số người không bị nhiễm HIV trong cùng năm}}{\text{Tổng số người không bị nhiễm HIV trong cùng năm}} \times 1.000$$

5. Data availability and disaggregation

Annually available figures from 2014-2019

There are no detailed data for this indicator.

(Published source: 2020 national report on 5-year progress towards implementation of sustainable development goals. Data from the Ministry of Health)

6. Comparability/deviation from international standards

This indicator corresponds to the global indicator “3.3.1 Number of new HIV infections per 1,000 uninfected population, by sex, age and key populations”. The concept of the two indicators is the same, but the global indicator has an additional subdivision according to the mode of transmission.
