

0.a. Goal

Goal 11: Sustainable and resilient urban and rural development; ensure a safe living and working environment; reasonable distribution of population and labor by region

0.b. Target

Target 11.6: Reduce harmful environmental impacts on people in cities, improve air quality management, urban waste and other waste sources (global 11.6 target)

0.c. Indicator

Indicator 11.6.4. GHG emissions per capita

0.e. Metadata update

June 2021

1.a. Organisation

Ministry of Natural Resources and Environment;

2.a. Definition and concepts

Greenhouse gas emissions are gaseous components of the atmosphere, including natural gases and gases produced by human activities, that absorb and emit radiation at specific wavelengths in the spectral range of thermal infrared radiation emitted from the earth's surface, atmosphere and by clouds. These properties cause the greenhouse effect, only the heat-trapping effect in the lower atmosphere by greenhouse gases that absorb radiation from the ground and emit it back to the ground, making the lower atmosphere layer and the earth's surface warm. Under the Kyoto Protocol, the emissions causing the greenhouse effect are mainly composed of CO₂, CH₄, N₂O, HFCs, PFCs, SF₆, and NF₃.

The amount of greenhouse gas emissions calculated as CO₂ emissions, collected nationwide.

2.b. Unit of measure

block tons/person

3.a. Data sources

National level statistical reporting mode, Statistical reporting mode of the Ministry of Natural Resources and Environment

3.b. Data collection method

Table No. 007.N/BCB-TNMT, national statistical reporting regime.

More information at the link: <http://dwrn.gov.vn/uploads/laws/file/2017/2018/20-2018-tt-btnmt-quy-dinh-che-do-bao-cau-thong-ke-nganh-tnmt.pdf>

3.d. Data release calendar

2 years.

3.e. Data providers

Ministry of Natural Resources and Environment

3.f. Data compilers

Ministry of Natural Resources and Environment

4.a. Rationale

The indicator reflects the emission of gases that mainly cause the greenhouse effect, destroy the ozone layer and have a direct impact on climate change.

4.c. Method of computation

Method of computation

Công thức tính:

$$\frac{\text{Lượng khí thải hiệu ứng nhà kính bình quân đầu người (tấn)}}{\text{tấn}} = \frac{\text{Tổng lượng khí thải hiệu ứng nhà kính quy đổi ra CO}_2 \text{ trong năm (tấn)}}{\text{Dân số bình quân năm (người)}}$$

5. Data availability and disaggregation

Annual data from 2010-2018 from the International Energy Organization and the World Bank published in the Country Report 2020 on 5-year progress in implementing the sustainable

development goals.

There are no officially published data from the Ministry of Natural Resources and Environment.

6. Comparability/deviation from international standards

This indicator reflects the sustainable development goals of Vietnam (target 11.6). The set of global sustainable development indicators does not have this indicator
