2.a. Definition and concepts

The fertility rate between the ages of 10-19 years old is the total number of live births of women aged 10-19 years old per thousand women in the same age group.

2.b. Unit of measure

per 1000 women 10-19 years old

2.c. Classifications

The list of administrative units in Vietnam issued together with the Prime Minister's Decision No. 124/2004/QD-TTg dated July 8, 2004 and the changes updated by the General Statistics Office to date December 31, 2019)

3.a. Data sources

- Population and housing census;

- Census midterm;

- Population change and family planning survey;

- Administrative data.

3.b. Data collection method

The indicator "birth rate between 10-19 years old" is compiled from data sources of the Population and Housing Census (10-year cycle), the mid-term population and housing census (period of 10-19 years). 5-year period) and extrapolated from the results of the annual population change - family planning sample survey. These Census and Census are all part of the National Statistical Census Program

3.f. Data compilers

General Statistics Office

4.a. Rationale

- The indicator is an important measure to assess maternal health after birth and the reduction in infant mortality. This indicator also provides indirect evidence on the ability to access reproductive health care services of young people, and especially unmarried young people often face many difficulties in accessing health care services. reproductive health.

- Provide basic data for the design of reproductive health education and communication activities and assessment of risks related to reproductive health among 10-19 year old girls.

4.c. Method of computation

Method of computation

Công thức tính:

$$\text{Tỷ suất sinh trong độ tuổi từ 10-19 tuổi} = \frac{\text{Tổng số trẻ sinh ra sống của phụ nữ từ 10-19 tuổi}}{\text{Tổng số phụ nữ từ 10-19 tuổi}} \times 1.000$$

5. Data availability and disaggregation

- Only figures for 15-19 year olds from 2016-2019

- No general data and data for 10-14 year old group

(Published source: SDG-ASEAN indicator data; General Statistics Office).

6. Comparability/deviation from international standards

Corresponding international indicator "3.7.2: Adolescent birth rate (aged 10-14 years; aged 15-19 years) per 1,000 women in that age group". The international indicator is disaggregated by: Age, education level, number of children alive, marital status, socioeconomic status, geographical location and others while the Vietnamese indicator is disaggregated by : Education level of the mother; age group (10-14 years old, 15-19 years old); urban/rural and province/city directly under the Central Government
